

COVID -19 SOLUTIONS

Office Reimagined

In the aftermath of a global pandemic, it is clear that a new de-densified work environment is emerging. In preparation for a return to office, [Cambridge Construction Group LLC](#) is pleased to offer greater peace of mind to our valued tenants and clients by assisting in the reconfiguration of a safer office landscape.

New safety measures include the installation of touchless entry points to prevent the spread of disease through surface contamination, the installation or modification of systems furniture such as plexiglass dividers to prevent contact from the spray of fluids, and HVAC upgrades such as the installation of GPS Bipolar Ionization to eliminate airborne pathogens like the coronavirus.

Ultimately, we understand that the new normal is difficult to embrace, which is why we are here to help our tenants and clients to navigate a reimagined office environment as we create safer and more effective workplaces together.

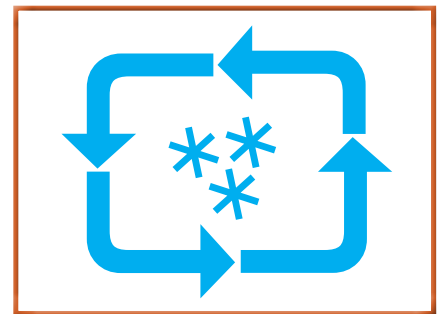

Touchless Entry

*Prevent surface contamination

Plexiglass Dividers

*Guard against exposure

HVAC Upgrades

*Eliminate airborne pathogens
